## PROOF USING GRADIENT DESCENT

**Question:** Show that the right circular cone of least curved surface and given volume has an altitude equal to  $\sqrt{2}$  time the radius of the base.

**Solution:**

### *Objective Function and Constraint*

The **Curved Surface Area (CSA)** of the cone is:

$$\text{CSA} = \pi r \sqrt{r^2 + h^2}. \quad (1)$$

The volume constraint is:

$$V = \frac{1}{3} \pi r^2 h, \quad (2)$$

which gives:

$$h = \frac{3V}{\pi r^2}. \quad (3)$$

Substituting  $h$  into the CSA:

$$\text{CSA}(r) = \pi r \sqrt{r^2 + \left(\frac{3V}{\pi r^2}\right)^2}. \quad (4)$$

### *Gradient of CSA*

To minimize CSA, we compute its gradient:

$$\frac{d}{dr}[\text{CSA}(r)] = \pi \left( \sqrt{f(r)} + \frac{r}{2\sqrt{f(r)}} \cdot f'(r) \right), \quad (5)$$

where:

$$f(r) = r^2 + \left(\frac{3V}{\pi r^2}\right)^2, \quad (6)$$

$$f'(r) = 2r - 2\left(\frac{3V}{\pi r^2}\right) \cdot \frac{6V}{\pi r^3}. \quad (7)$$

### *Gradient Descent Algorithm*

We minimize CSA using gradient descent:

$$r_{\text{new}} = r_{\text{old}} - \eta \frac{d}{dr}[\text{CSA}(r)], \quad (8)$$

where  $\eta$  is the learning rate.

### *Numerical Results*

After running gradient descent with:

- Learning rate ( $\eta$ ) = 0.01,
- Tolerance =  $10^{-6}$ ,
- Maximum iterations = 10,000,

we obtained:

$$r \approx 0.877308077654739, \quad (9)$$

$$h \approx 1.2407009817987995, \quad (10)$$

$$\frac{h}{r} \approx \sqrt{2}. \quad (11)$$

### *Conclusion*

The gradient descent results confirm that the cone of least curved surface area for a given volume satisfies:

$$h = \sqrt{2}r. \quad (12)$$
